

Bar Trio Bent

Perfect mix of excellent creeping bent grasses for the closest mowing!

- Yellow Jacket Water Manager inside!
- High resistance to diseases like Dollar Spot and Fusarium.
- Extremely fast greens
- Very dense greens.
- For the closest mowing, 2.5 mm!
- Fast establishment.
- Year round green colour.

Yellow Jacket Water Manager inside!

Golf

At Barenbrug we have been breeding grasses for golf courses for more than half a century. So Barenbrug golf grass mixtures are well-developed and have conquered the market worldwide. To ensure that our new products are used in the best way possible, we work closely with greenkeepers and golf course architects.

- Green
- Tee
- Fairway
- Rough

Characteristics

Close mowing tolerance

Higher resistance to diseases

Requires less irrigation

Requires less fertilisers

Requires less mowing

Higher wear tolerance in summer

Higher wear tolerance in winter

Higher ball speeds

Fast establishment

Self-repairing

Higher turf density

Year round green color

Higher salt tolerance

The world's first Seed Enhancement Technology ensures precisely the right balance of moisture for both optimum germination and establishment. Yellow Jacket Water Manager was developed by Aquatrols in cooperation with Barenbrug. When it is irrigated, the substance used to enhance the seed is released into the soil, where it adheres to grains of sand, creating a Plant Survival Zone. Besides retaining water, this zone also regulates the amount of water around each seed, optimising the growing conditions to guarantee vital grass plants that will develop quickly.

High resistance to dollar spot and Fusarium

Bar Trio Bent contains the very best varieties with good resistance to, in particular, dollar spot and Fusarium. Creeping bent grass tends to be fairly susceptible to diseases. Barenbrug has paid a lot of attention to developing varieties that are less susceptible to diseases. Dollar spot causes small round patches in swards, while Fusarium affects the grass's roots, turning them black and ultimately killing them.

Higher salt tolerance

Extremely fast greens

The fact that Bar Trio Bent can be mown so closely implies extremely high ball speeds and playing quality. A Stimp meter can be used to check whether ball speeds are indeed that high on a green. This simple device enables greenkeepers to accurately measure ball speeds.

Very dense greens

The combination of the best varieties in the 100% creeping bent grass mixture results in very dense greens. The use of different varieties ensures synergy, which means that the individual varieties contained in the mixture strengthen one another. Bar Trio Bent consequently creates a very dense sward with a high optical quality and excellent playing quality.

The closest mowing possible, to 2.5 mm

Bar Trio Bent consists of 100% creeping bent grass. It comprises at least three different varieties and can be mown the closest possible, down to 2.5 mm. It is advisable to use Bar Trio Bent for seeding greens with the shortest grass ever.

Fast establishment

Creeping bent grass is known for its fast establishment. Its high establishment rate has now even been improved by using the best selected varieties. This fast establishment means that there is less risk of annual meadow grass establishing, and golfers can soon enjoy a beautiful green on which their balls will roll very fast.

Green all the year round

An unattractive colour can seriously spoil a green's overall effect. Various grasses do not survive winter, but the optical quality of Bar Trio Bent is high all year round.

Specifications

Speed of establishment	fast
Fertiliser requirement	high
Speed of growth	fast
Sowing rate	6-8 gr/m ²
Mowing height	from 2,5 mm
Packaging	15 kg
Sowing depth	0.4 - 0.6 cm

Composition

100% *Agrostis stolonifera* (3 varieties)
